IDENTIFIERS *Alabama

ABSTRACT

Facilities and space utilization data for Alabama public colleges and universities are presented for fall 1982. The information was extracted from facilities inventory and space utilization data provided by the public colleges and universities of Alabama. Building inventory data describe quantities and conditions of different categories of facilities, while utilization data provide a measure of the level of the scheduled use of general classrooms and class laboratories. For each senior institution, junior college, and technical college, information is provided on: the amounts of space available, by general function, at each institution; distribution of assignable space according to usage and space per full-time equivalent student; the state of maintenance and the level of conformity to modern codes of institutional facilities; a measure of usage and suitability of available classrooms; utilization of class laboratories; and land areas of the campuses, broken down by the types of land development. It is concluded that utilization of general classroom space and class laboratory stations is lower than optimum; however, at some institutions, there is a net shortage of class laboratory space. Definitions are included. (SW)

Facilities Inventory and Space Utilization Summary

Introduction:

This report contains facilities inventory and space utilization data for the Alabama public colleges and universities. The tables which follow correspond to those of similar reports prepared approximately two and three years ago. The building inventory data (Table I, II, and III) describe quantities and conditions of different categories of facilities. The utilization data (Tables IV and V) provide a measure of the level of the scheduled use of general classrooms and class laboratories. Table VI, Land Inventory, summarizes campus areas by type of land use.

The information summarized here was extracted from the facilities inventory and space utilization data provided by the public colleges and universities of Alabama reflecting (in most instances) conditions in the Fall of 1982. (To reduce the workload on institutional administrators the requirement for collecting and submitting this information was reduced from an annual cycle to a biennial cycle.)

The terminology and techniques for analysis used in preparing the building inventory and space utilization tables are those which are published in the U. S. Department of Health, Education, and Welfare Facilities Inventory and Classification Manual-1973 and the Higher Education Planning and Management Manuals prepared by the National Center for Higher Education Management Systems (NCHEMS). A bibliography of these and other pertinent references is provided at the end of the report.

Definitions:

The following definitions apply to the terms used in the tables:

Gross Building Area - the sum of floor areas included within the outside faces of exterior walls for all stories or areas having floor surfaces.

Net Assignable Building Area - the sum of all areas on all floors of a building assigned to, or available for assignment to, an occupant, including every type of space functionally usable by an occupant (excepting custodial, circulation, mechanical, and structural areas).

Educational and General Space - the gross square feet of space assigned to the various organizational units (department, schools, etc.) for instruction, research, public service, academic support, student services, institutional support, and operation and maintenance of plant. It includes classrooms, all types of laboratories, library facilities, faculty and administrative offices, etc.

Auxiliary Space - the gross square feet of space used by activities that furnish goods or services to students, faculty, or staff and that charge a fee directly related to, although not necessarily equal to, the costs of the goods or services. Examples are residence halls, food services, college stores, and bookstores, etc.

Other Space - the gross square feet of space occupied by activities that are independent of and unrelated to the institution. An example is space leased to or used by activities not associated with the institution.

Building Conditions:

Satisfactory - Building is suitable for continued use with normal maintenance.

Renovation Required - 0 to 25% - Building requires restoration work, but no major room changes or alterations. Estimated cost is not greater than 25% of the building's estimated replacement cost (ERC).

Renovation Required - 25 to 50% - Building requires major updating/modernization. Estimated cost is 25-50% of the building's ERC.

Renovation Required - 50 to 100% - Major remodeling is required. Estimated cost is 50-100% of the building's ERC.

Demolish - Building is unsafe and structurally unsound and should be demolished or abandoned.

Terminate - The institution plans to terminate use for reasons other than unsafeness or structural unsoundness, e.g., vacating of leased space.

Classroom - A room used by classes for regularly scheduled instruction where the classes require no special-purpose equipment for student use.

Class Laboratory/Shop - A room used by regularly scheduled classes that require special-purpose equipment for student participation, experimentation, observation, or practice in a field of study.

Student Station - A place for one student to receive instruction in a classroom laboratory/shop. This place may be a student desk, a chair at a seminar table, a work area in a laboratory, etc.

FTE Students - Full-time equivalent student enrollment. Computed for colleges and universities and junior colleges by dividing fall term credit hours by 15 for undergraduates, 12 for graduate level I, and 9 for graduate level II. (For institutions using semester credit hours but operating on a quarter academic calendar, the divisors are 10, 8, and 6.) For technical colleges, it is computed by counting full-time enrollment plus 1/3 of part-time enrollment. For community colleges, the FTE is the sum of the FTE totals for the junior college and technical college divisions.

Weekly Room Hours (WRH) - The average number of hours per week that classrooms and classroom laboratories are scheduled to be used for credit-bearing instructional activity.

Weekly Student Hours (WSH) - One WSH is the use of one room by one student for one hour of the week. Thus, three (3) WSH would be recorded for one student attending a class for one hour each day on three days of the week. Similarly, sixty (60) WSH would be recorded for a class of twenty (20) students attending a class for one hour each day on three days of the week.

Average Weekly Room Utilization Rate (AvRUR) - The average number of hours per week a classroom or class laboratory is used for scheduled classes.

Average Station Occupancy Ratio (AvSOR) - This measure reflects the average percent of student stations occupied when the room is in use. Stated another way, it answers the question, "When this room is used, what is the average percent of student stations occupied?"

Space Factor - The space factor is a general measure of the efficiency or intensity of use of rooms. It is computed by dividing the room area (in NASF) by the number of WSH generated in those rooms.

Significance of Data:

The following explanatory remarks may help to establish a frame of reference for the data in the tables.

Table I - Facilities Inventory - This table summarizes the amounts of space available, by general function, at each institution. The ratio of net assignable area to gross area can reflect on the efficiency of building design, given a comparable mix of building types. The change in area since 1980 provides an indicator of campus growth.

Table II - Distribution of Assignable Space According to Usage and Space per FTE Student - These data reflect the emphasis on campus development - academic and research facilities vs. athletics, recreational, and residential facilities. Also, they reflect density of student usage.

Table III - Condition of Buildings - Table III summarizes in very general terms the state of maintenance and the level of conformity to modern codes of institutional facilities.

Table IV - Utilization of Classrooms - The Average Room Utilization Rates (AvRUR) and Average Station Occupancy Ratios (AvSOR) provide a measure of usage and suitability of available classrooms. Generally accepted criteria call for an AvRUR between 25 and 30 hours per week, based on a normal operating week of 40 to 45 hours. Institutions operating more hours should have correspondingly higher rates. AvSOR values should fall between 0.60 and 0.70, with the larger ratios associated with lesser classroom capacities. The space factor is a broad indicator of overall efficiency of space usage, with values between 0.8 and 1.2 square feet per weekly student hour being considered acceptable.

Table V - Utilization of Class Laboratories - Accepted values for AvRUR for class laboratories are between 14 and 18 hours per week for upper division courses and between 22 and 26 hours per week for lower division courses. AvRUR values for vocational training shops often exceed 30. AvSOR values should be in the range of 0.55 to 0.65 for upper division laboratories and of 0.75 to 0.85 for lower division laboratories. The space factor is less significant for class laboratories than for classrooms because of the variances in space requirements for laboratories serving different disciplines. However, given similar program "mixes" the space factors provide an indication of relative space usage efficiency among institutions.

Table VI - Land Inventory - This table summarizes the land areas of the campuses of the postsecondary institutions, broken down by the types of land development. The "footprint" areas of buildings are excluded as are off-campus parcels of land not used by the institutions.

Conclusions:

Besides affording a means of comparing facilities data for different institutions, the tables which follow provide a basis for drawing certain conclusions regarding the quantity, condition, and use of Alabama's higher education facilities.

According to data published by the National Center for Education Statistics (NCES) in 1974, Alabama's universities and colleges have, overall, more non-residential space per full-time equivalent student (FTE) than the U.S. average (152.2 Net Assignable Square Feet (NASF) per FTE vs. 136.2 NASF/FTE for senior institutions and 88.2 NASF/FTE vs 67.2 NASF/FTE for 2-year colleges). More recent data, unfortunately, is not directly comparable with these quantities.

The average utilization of general classroom space at Alabama public institutions is significantly lower than optimum. Likewise, utilization of class laboratory stations is lower than optimum, but many class laboratory stations are smaller, in NASF, than is dictated by current criteria, so there is, at some institutions, a net shortage of class laboratory space. Alabama's classroom and class laboratory utilization is comparable to those of other southern states for which we have data.

More than 11 million gross square feet (approximately 31% of the total) of building space, excluding facilities scheduled for disposal or demolition, requires major repair or renovation. This represents a backlog of \$200 million or more.
